

U-Mole Chooses Digicat 100

U-Mole Chose the Digicat 100 Underground Service Locator

U-Mole, one of Europe's leading no dig specialist companies, has added Laser Alignment underground

service location systems to its growing list of alternative utility products. U-Mole chose the Laser Alignment Digicat 100, made by Cable Detection Ltd., a Leica Geosystems company, to bring ease of use and more efficiency to their additional on-site safety practices.

Managing Director, Russell Fairhurst, commented that safety is a critical part of his operations and that the Digicat 100 locator and the Digitex 8/33 signal generator provide accurate information on what services lie underground to assist in fast, safe, work progress.

Other types of equipment have been used in the past; however, the combination of on-site benefits including safety, rugged and reliable construction, digital technology, low cost of ownership and user friendliness made the decision to purchase the Cable Detection products an easy one.
